

DynSave

Apollo ID: 24836

Datum: 30.11.2010

Typ produktu: R - software

Autoři: Ing. Jiří Krejsa, PhD., Ing. Stanislav Věchet, PhD

Popis a technické parametry

DynSave is application that allows the user to select from cameras installed on the computer, set its properties including framerate and resolution and save the images on harddrive with the top speed the computer and camera are capable of. Saved images can be further used for image analysis such as position tracking, etc. The time when image was acquired is stamped into its filename.
Requirements: • Operating system: Windows XP or higher • Microsoft .NET framework 3.5 or higher installed on the system

Vazba na projekt

FSI-S-10-15 "Využití nelineárního dynamického modelu pro pokročilé řízení mechatronických soustav"
